

# FENDER BLOCKS

## PROTECTIVE, STRONG AND FLEXIBLE

In all our Fender Systems we can guarantee a low weight, a high-end damping and also a high wear resistance, which results in an excellent ratio between performance and weight, more or less grip due to variety in top layers.

A unique production method is used to mill the foam with the intended correct density into the right shape. Thanks to a patented system with a polyurea finish and aramid reinforcement, the Fenders are both protective and flexible.

These products are the result of a successful partnership between Tec Wire and Fender Innovations.

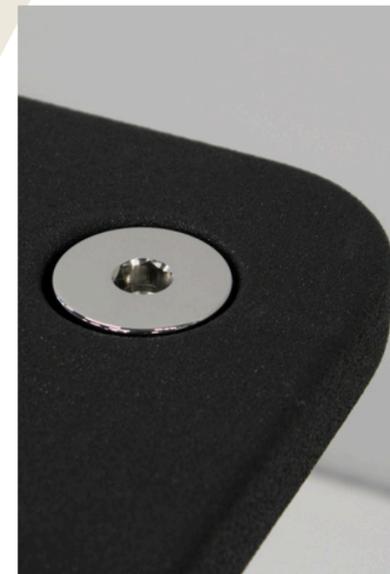

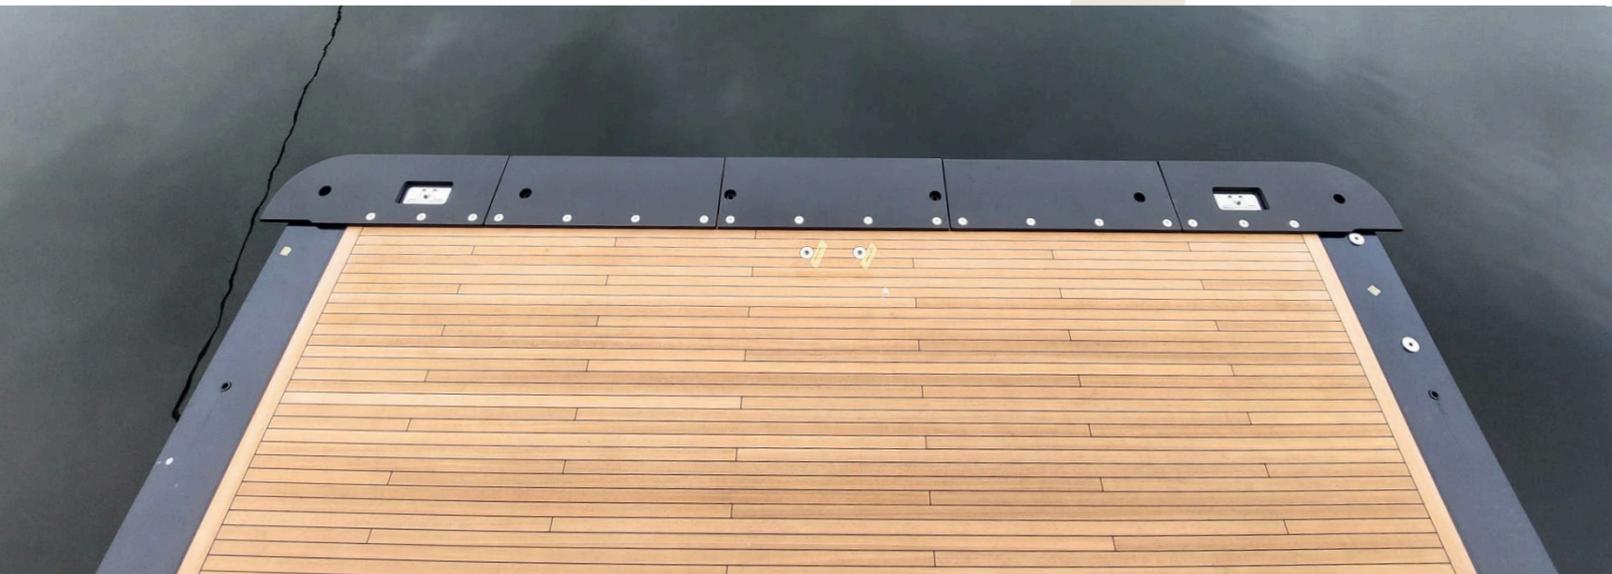

Different densities in foam possible

Easy to install on any kind of insert, also existing ones

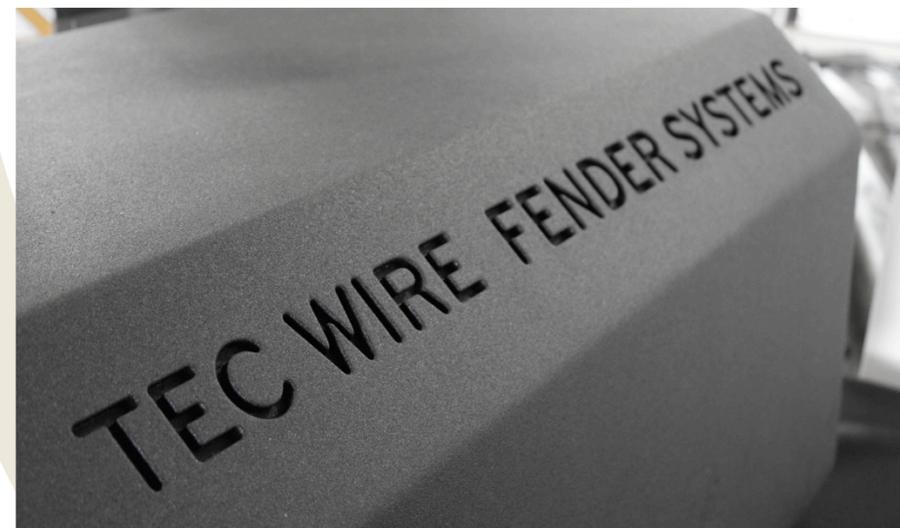

Closed cell cushioning part, manufactured from crosslinked hybrid foam core

Shapes are made-to-measure according to onboard location

## PRODUCT SPECIFICATIONS

HEIGHT	According to requirements
WEIGHT	Dependant on features
MATERIAL	Foam, Polyurea and Aramid
FINISH	Antiskid or painted in colour
