FENDER BLOCKS

PROTECTIVE, STRONG AND FLEXIBLE

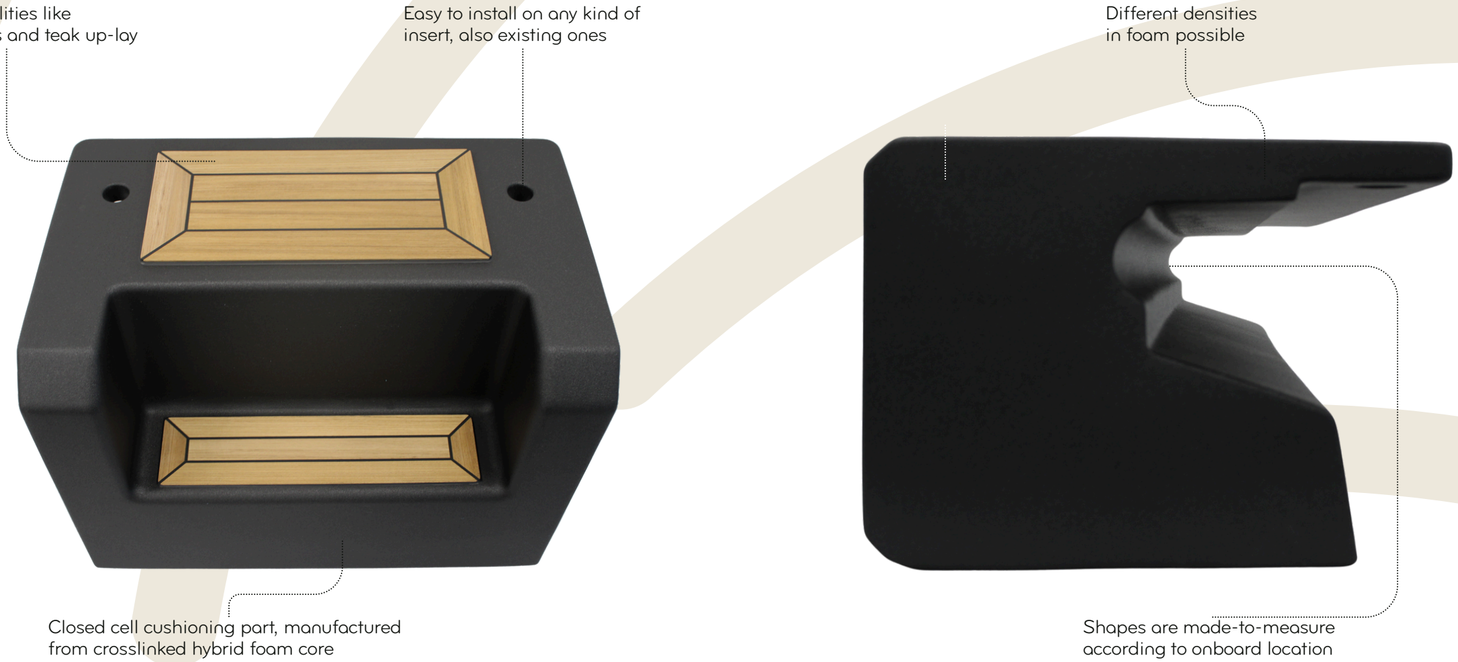

In all our Fender Systems we can guarantee a low weight, a high-end damping and also a high wear resistance, which results in an excellent ratio between performance and weight, more or less grip due to variety in top layers.

A unique production method is used to mill the foam with the intended correct density into the right shape. Thanks to a patented system with a polyurea finish and aramid reinforcement, the Fenders are both protective and flexible.

These products are the result of a successful partnership between Tec Wire and Fender Innovations.

PRODUCT SPECIFICATIONS

HEIGHT	According to requirements
WEIGHT	Dependant on features
MATERIAL	Foam, Polyurea and Aramid
FINISH	Antiskid or painted in colour
